- 🔌 Your electric car is charging
- 🌐 Cable and vehicle identification
- 🌐 Internet connection
- 🕒 Charging station power supply

Choose how you wish to use it!

The charger has a built-in RFID card reader, allowing you to start and finish charging only with a personal RFID card. In public or semi-public places, we always recommend using the charger with an RFID card to prevent unauthorized access to the charger. If you charge only at home, it may be more convenient to have the RFID function turned off already during installation.

** Depending on the car, it may be necessary to press the cable unlock button on the remote control or inside the passenger compartment to release the cable from the car charging socket.*

Charging with an RFID card

- 1 Connect the charging cable to the car and the charger
- 2 Wave the RFID card at the location indicated on the charger to start charging; charging begins
- 3 To finish charging, wave the RFID card again; charging ends

Charging without RFID:

- 1 Connect the charging cable to the car and the charger
- 2 Charging begins automatically
- 3 To finish charging, stop it from the car and disconnect the charging cable from the car
